EXPERIENCE

Software Engineer in Test

Apr 2026 – Present

Kaizen Gaming · Full-time

- Promoted from Junior Software Engineer in Test, driving quality across front-end and back-end testing.

Junior Software Engineer in Test

Jan 2024 – Apr 2026

Kaizen Gaming · Full-time

- Managed tickets in Jira, ensuring seamless coordination and tracking throughout the sprint process.
- Performed Test Analysis in Jira, defining scenarios with precise preconditions, steps, and expected results.
- Built Integration tests in C# / xUnit to validate endpoint functionality.
- Built Contract tests in C# / xUnit to ensure endpoint contracts are never broken during development or deployment.
- Mocked endpoint requests and responses with the C# Moq library and WireMock, enabling isolated automated tests.
- Ran scenario-based suites in containerised environments with Podman, databases, and RabbitMQ for fully isolated testing.
- Built Component tests with Playwright & TypeScript to validate component functionality.
- Used Git and GitLab merge requests within the full Scrum cycle to ensure code quality and collaborative development.

Junior Software Engineer in Test

Jan 2022 – Jan 2024

Dataverse Ltd · Full-time

- Developed a C# and Selenium automation framework from scratch and maintained it for stability, scalability, and effectiveness.
- Led the test automation engineering team as the informal manager.
- Trained new team members on the framework, tools, and testing workflow, and reviewed their automation code.
- Used Redmine to create issues and report bugs, and TestRail to create, analyse, and update test cases.
- Used Postman for API testing, Git for version control, and the Scrum process for Agile development.

Junior Software Engineer in Test

Jul 2021 – Jan 2022

Dataverse Ltd · Internship

- Contributed to automating test cases while learning the team's tools and QA workflow.
- Built hands-on test automation experience that led to a full-time role.
